

Advantages and Disadvantages about Conures

There are many types of small conures such as: Green Cheek Conures, yellow sided Conures, Cinnamon Conures, Pineapple Conures etc

Let's start with the **Advantages**

- They consist of a mixture of beautiful colours
- There is no difference with the above mentioned small conures apart from the colours
- There is no difference between male and female whether it's with personality or behaviour.
- All above Conures are very good at mimicking and making different sounds, they also have a sweet natural voice.
- They always make lots of sounds naturally throughout the day but are not very loud and irritating.
- All above Conures are very clever, playful and active birds and love human interaction.
- Their life span is 10 to 12 years.
- Physically are very strong birds
- Their immune system is very strong and they don't fall ill very often.
- They usually grow up 10 to 12 inches from head to toe and their overall body size is thin.
- They bond very easily but to start off with they may be scared in their new environment but will settle very quickly and easily.

Disadvantages

- They are not very good talkers, they have a small beak so they can't say a lot of words
- The memory of conures is not very good, so hence the reason that they don't remember many words.
- Conures require a lot of attention or another conure if you are not able to give them much time as they get lonely very quickly

What can cause HARM to the Conures

Damp, smoke (cooking, cigarettes etc), air fresheners, scented candles or fragrance sticks.

PLEASE TAKE EXTRA CARE OF THE ABOVE POINTS FOR THE WELFARE OF YOUR CONURE
